ALASKA FEDERAL-AID NUMBERING SYSTEM

Primary System

Federal-Aid Primary Route numbers have been established as follows:

1. The primary system established consists of the principal highways, either existing or scheduled for early contract construction, and a projected ferry and highway system through the southeastern section.
2. Projected expansions of the system generally will be constructed and maintained as secondary roads until traffic volume dictates reclassification to a Primary Route.
3. Beginning in the southwest portion of the State, south-north routes were given odd numbers and west-east routes were given even numbers.

Secondary System

The Secondary System established consists of two classifications identified as follows:

- Class "A" - Principal secondary roads serving as main arteries and requiring improvements within the foreseeable future.
- Class "B" - Secondary roads of the type normally constructed and maintained by states or counties.

For ease in geographical location and assignment of secondary route numbers, the State has been divided into 9 zones, identified on a marked Alaska map E.

Class "A" routes were assigned 3-digit numbers, the first digit indicating the zone location. Odd numbers were assigned to south-north routes and even numbers to west-east routes.

Class "B" routes were assigned 4-digit numbers, the first digit indicating the zone location. South-north routes were assigned odd numbers; west-east routes assigned even numbers. A zero as the last digit indicates an isolated route not connected to any principal system.

As in the primary system, low numbers were assigned to the southern and western areas of each zone, progressing to the higher numbers in the northern and eastern areas.
