A.R.C. ORDER NO. 40

**SUBJECT: Numbering System for Alaska Roads**

A.R.C. Order No. 34, dated September 15, 1950 is hereby revoked in its entirety, and is superseded by the provisions of this order.

1. Purpose

A new numbering system is hereby prescribed to replace the old system of "Route Numbers" for roads in Alaska. The new system is intended to accomplish the following purposes:

- a. To reduce the number of route designations for roads by grouping like roads.
- b. To provide a descriptive number for use in the field.
- c. To give an accounting number for use in the office, indicating the District, location, and type of road.

2. Decimal System

Each road will be assigned a number consisting of three digits to the left of a decimal point, and local roads will also have one or more digits to the right of the decimal point.

- a. The first digit, beginning at the left, indicates the general system of roads of which the particular road is a part. If this digit is zero, it indicates that the road is an isolated one and not a part of any one of the primary systems. 3
- b. The second digit indicates the District in which the road is located. 1
- c. The third digit, when it is a zero, indicates that the road referred to is the primary highway of the system as designated by the first digit. A numeral normally indicates that the road is a feeder road from the primary highway, but is also used to indicate that all or part of the primary highway is built to the feeder road standard. 0
- d. The first figure to the right of the decimal point is used to designate a local road system or an individual road. If the number of local roads or local systems, branching off a given main road or feeder, exceeds 9 the numbering continues through 10, 11, etc. Normally, only one number to the right of the decimal point will be sufficient for cost accounting and for assignment of work orders. However, accurate

information on mileage of all roads, whether systems or individual roads, is required semi-annually. Local names should continue to be assigned to roads for ready identification in the field. If the Districts so desire they may numerically identify individual local roads by adding a second decimal and further numbers.

### 3. Systems of Roads

The following primary systems of roads have been designated:

- Route 1 - Richardson Highway and branches
- Route 2 - Alaska Highway and branches
- Route 3 - Glenn Highway (including Tok Cutoff), its extension to Eagle and branches
- Route 4 - Seward - Anchorage Highway and branches
- Route 5 - Sterling Highway and branches
- Route 6 - Steese Highway and branches
- Route 7 - Elliott Highway, its extension to Manley Hot Springs, and branches
- Route 8 - Parson-Cambwell-McKinley Park Road, its extension to Kuntishna, and branches
- Route 9 - Juneau, Ice Harbor, Eaines, Haines Junction, and branches

### 4. Numerical Designation of Districts

The following numerical designations of Districts are to be used in the numbering system:

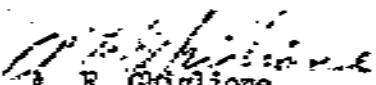

- Anchorage District - No. 1
- Valdez District - No. 2
- Fairbanks District - No. 3
- Nome District - No. 4
- Haines Sub-district - No. 5

### 5. Explanation

Attached hereto is a list intended to reflect all roads under A.R.C. jurisdiction. This gives old route numbers and gives mileage as accurately as it can be determined from information available to this office.

Within the coming season each District should check all mileages within their jurisdiction and report any discrepancies. This report should cover any mileage definitely abandoned and should correct mileage affected by realignment. It is believed that a study of the above, together with the attached list, will readily show the method used and the simplicity of the system. It will be noted that the Sterling Highway itself is numbered 511 in order that its standard of construction may be identified by the third numeral as being that of feeder standard. In the same way the Steese Highway is partly 630 and partly 631. Care should be taken to avoid duplication of mileage where two roads may be felt to coincide. For example the Steese Highway should be measured from the city limits but the Steese Highway to University road is now considered a branch of the Steese and should be measured from the junction of the two. It will be noted that some roads numbered as feeders, because of their geographical position, are listed under the heading Through Roads because of their construction standard. The Mitmuska - Wasilla Junction road should be measured from the junction with the Palmer - Mitmuska road just north of Mitmuska to the junction with the Finger Lake - Wasilla road east of Wasilla.

There is also attached a reconciliation list which is designed to inform the field offices as to how certain mileages were adjusted or how certain roads were reclassified. Further reconciliation will be necessary at the end of this season, when all Districts have reported on their mileage check. In the meantime new construction will be added to our records from the monthly reports submitted by the Districts and it is requested that utmost care be given this feature of the reports.

  
A. F. Griglione  
Chief Engineer

A.R.C. ORDER NO. 40

SUBJECT: Numbering System for Alaska Roads

A.R.C. Order No. 34, dated September 15, 1950 is hereby revoked in its entirety, and is superseded by the provisions of this order.

1. Purpose

A new numbering system is hereby prescribed to replace the old system of "Route Numbers" for roads in Alaska. The new system is intended to accomplish the following purposes:

- a. To reduce the number of route designations for roads by grouping like roads.
- b. To provide a descriptive number for use in the field.
- c. To give an accounting number for use in the office, indicating the District, location, and type of road.

2. Decimal System

Each road will be assigned a number consisting of three digits to the left of a decimal point, and local roads will also have one or more digits to the right of the decimal point.

- a. The first digit, beginning at the left, indicates the general system of roads of which the particular road is a part. If this digit is zero, it indicates that the road is an isolated one and not a part of any one of the primary systems.
- b. The second digit indicates the District in which the road is located.
- c. The third digit, when it is a zero, indicates that the road referred to is the primary highway of the system as designated by the first digit. A numeral normally indicates that the road is a feeder road from the primary highway, but is also used to indicate that all or part of the primary highway is built to the feeder road standard.
- d. The first figure to the right of the decimal point is used to designate a local road system or an individual road. If the number of local roads or local systems, branching off a given main road or feeder, exceeds 9 the numbering continues through 10, 11, etc. Normally, only one number to the right of the decimal point will be sufficient for cost accounting and for assignment of work orders. However, accurate

Rev. pages 5 & 8

information on mileage of all roads, whether systems or individual roads, is required semi-annually. Local names should continue to be assigned to roads for ready identification in the field. If the Districts so desire they may numerically identify individual local roads by adding a second decimal and further numbers.

### 3. Systems of Roads

The following primary systems of roads have been designated:

Route 1 - Richardson Highway and branches

Route 2 - Alaska Highway and branches

*Taylor* Route 3 - Glenn Highway (including Tok Cutoff), its extension to Eagle and branches

Route 4 - Seward - Anchorage Highway and branches

Route 5 - Sterling Highway and branches

Route 6 - Steese Highway and branches

Route 7 - Elliott Highway, its extension to Manley Hot Springs, and branches

Route 8 - Paxson-Cantwell-McKinley Park Road, its extension to Kantishna, and branches

Route 9 - JUNEAU, TEE HARBOR, HAINES, HAINES JUNCTION, and branches

### 4. Numerical Designation of Districts

The following numerical designations of Districts are to be used in the numbering system:

Anchorage District - No. 1

Valdez District - No. 2

Fairbanks District - No. 3

Nome District - No. 4

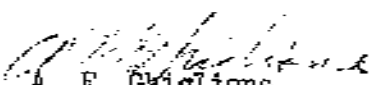

Haines Sub-district- No. 5

### 5. Explanation

Attached hereto is a list intended to reflect all roads under A.R.C. jurisdiction. This gives old route numbers and gives mileage as accurately as it can be determined from information available to this office.

Within the coming season each District should check all mileages within their jurisdiction and report any discrepancies. This report should cover any mileage definitely abandoned and should correct mileage affected by realignment. It is believed that a study of the above, together with the attached list, will readily show the method used and the simplicity of the system. It will be noted that the Sterling Highway itself is numbered 511 in order that its standard of construction may be identified by the third numeral as being that of feeder standard. In the same way the Steese Highway is partly 630 and partly 632. Care should be taken to avoid duplication of mileage where two roads may be felt to coincide. For example the Steese Highway should be measured from the city limits but the Steese Highway to University road is now considered a branch of the Steese and should be measured from the junction of the two. It will be noted that some roads numbered as feeders, because of their geographical position, are listed under the heading Through Roads because of their construction standard. The Matanuska - Wasilla Junction road should be measured from the junction with the Palmer - Matanuska road just north of Matanuska to the junction with the Finger Lake - Wasilla road east of Wasilla.

There is also attached a reconciliation list which is designed to inform the field offices as to how certain mileages were adjusted or how certain roads were reclassified. Further reconciliation will be necessary at the end of this season, when all Districts have reported on their mileage check. In the meantime new construction will be added to our records from the monthly reports submitted by the Districts and it is requested that utmost care be given this feature of the reports.
