Description

The research of rights-of-way clearly involves history, law and; mapping. But mystical? One definition of “Mystical” is to have a reality that is not immediately apparent to the senses or the mind. And the research of ROW can be anything but apparent. This presentation reviews the website, “ROWAlaska.net” that I put together to make available research materials that I have used for many of my projects. It is intended to provide resources primarily about highway rights-of-way in Alaska and the research and analysis necessary to determine their interest, dimensions and location.
